mikeboy-40 -- eBay Store Review

Prepared by Jason using a 5-agent review of live account data (GetMyeBaySelling, GetAccount, GetItemTransactions) — account opened 2026-06-25, about 5.5 weeks old as of this review.

At a glance

$524.47 total value 71 active listings	**$202.08 revenue** 10 sales / 60 days	**17.2% effective rate** $34.70 fees paid	**3/3 promoted items sold** $4.90 ad spend

Overall: a healthy first five weeks. Sales are real and fees are being paid on schedule -- this is a working store, not a stalled one. The biggest opportunity is inventory mix, not anything broken.

Sales performance

10 sales in 60 days totaling $202.08 (avg sale $20.21) against 71 active listings averaging $7.39 -- sales are skewing well above the typical listing price, which is a good sign for pricing and photo quality.

Revenue is top-heavy: 3 sales (James Cook Signature Class auto /5 at $99, Donruss Optic Jackson Hawes at $30, Max Crosby Signature Class at $16.99) account for 72% of the 60-day total. That's not a problem by itself -- low-serial autos and inserts are supposed to carry the average -- but it means the other 7 sales (mostly $2.59-$12.08) are closer to break-even once fees and shipping labels ($5.11 total) are counted. The store's health depends more on landing a few more cards like the Cook auto than on moving volume in the $2-5 bin.

Promoted Listings

$4.90 spent across 3 promoted items (Max Crosby $1.95, Bears rookie lot $0.26, Donruss Optic Hawes $2.69) -- all 3 sold, combining for $58.99, an 8.3% ad-cost-to-revenue ratio. That's inside (better than) the 10-15% range generally considered healthy for Promoted Listings, so the money being spent is working efficiently. The sample is small (3 items), so it's not certain the ad spend caused these sales rather than just coinciding with cards that would have sold anyway -- but there's no downside signal here. Only 3 of 71 listings are promoted at all; a reasonable next step is adding promotion to 8-10 more of the higher-priced or most distinctive zero-watcher listings (see Inventory Health) rather than promoting everything at once.

Fees and margins

$34.70 in total fees against $202.08 revenue is a 17.2% effective take rate. Final Value Fee runs a flat $0.40 per order plus a percentage of item price + shipping -- that flat component falls hardest on the sub-$5 sales, where it can eat 8-15% of the sale on its own before the percentage fee is even applied. Worth a 5-minute check in Seller Hub: whether an eBay Store subscription is active, since Store tiers typically lower the per-category FVF percentage and that gap would close on its own with volume. Practical fix either way: bundling the sub-$5 singles into 3-5 card lots (see Inventory Health) means one flat fee shared across several cards instead of paid per card.

One housekeeping item, not urgent: the account payout method reads “NothingOnFile” in the legacy API field, but FeeNettingStatus is Enabled and there's no past-due balance ($0.00, PastDue: false) -- fees are netting normally against payouts. Worth a quick glance in Seller Hub to confirm the payout bank account shows verified, but nothing indicates a problem today.

Inventory health

- Price mix: ~40% of the 71 listings sit under $5, another third in the $5-10 band, and only 7 crest $15 (top two are $24.50 and $24.26 lots). There's very little above $25 to anchor the average the way the Cook auto did in sales.
- 2025 Topps Resurgence is over-represented and under-performing: 27 of 71 listings (38%) are Resurgence parallels of mid-tier rookies (Nabers, Milroe, Graham, Penix), but only 4 of those 27 carry a watcher, against 34% engagement account-wide. It's a lower-recognition product line and it's the majority of the dead weight.
- By contrast, the Panini Select/Prizm/Donruss Optic football singles watcher at a noticeably higher rate -- worth noting that roughly 10 of those are cards Jason transferred over as a starter batch, not cards Mike sourced independently. The lesson (source more $8-11 Select/Prizm-caliber singles) is proven, but replicating it means finding more inventory at that tier, not just reordering more Resurgence.
- One live duplicate: “2026 Topps Chrome Denzer Guzman Rookie Red White And Blue Refractor” is listed twice, at $7.49 and $1.50 -- these are competing with each other in search. End the $1.50 copy.
- Title quality is mixed. Strong titles front-load year/brand/set/player/serial (the Gavin Stone auto listing is a good template). Weaker ones use all-lowercase, emoji, or all-caps player names, and at least one omits year/brand/set entirely (a $1.00 listing titled just “sports trading card singles- Patrick Mahomes”) -- that one is losing all its search traffic to missing keywords.

Recommendations, in order

- Bundle the sub-$5 Resurgence singles into 3-5 card lots -- cuts the per-card flat-fee drag and clears the zero-watcher pile faster than individual sales will.
- End the duplicate Denzer Guzman listing and clean up the handful of all-caps / emoji / missing-keyword titles.
- Expand Promoted Listings from 3 to roughly 10 items, prioritizing the highest-priced zero-watcher listings first -- the current 8.3% ad-cost ratio has room to scale before it stops being efficient.
- Keep sourcing $8-11 Select/Prizm/Donruss singles in the style of the starter batch -- that tier is watchering and selling well above the Resurgence product.
- Quick Seller Hub check on Store subscription status and payout account verification -- neither is a fire, both are worth 5 minutes.

Five weeks in, this is a store that's selling, paying its fees on time, and getting real engagement on the right kind of card. The path from here is mix, not repair.
